

K9 Guardian – Protective System for K9

This newly developed protection system for K9 offers maximum protection while maintaining extreme mobility and full operational performance.

The K9 is protected by nine ballistic armor elements. By combining different elements, the handler is able to adapt to any threat.

The vest is offered with the ballistic inserts 220 and 320 as a standard, but any other inserts are possible, as well as a combination of those.

When developing the vest, our focus was on maximum mobility, ergonomics and high performance of the K9. Agility and mobility are not compromised in any way.

Additional measures for active and passive cooling significantly enhance the performance and extend the K9 action time.

Optional elements such as an additional protective collar, MOLLE-adaptable carrying handles, anchoring points and a system for secure and comfortable abseiling complete the overall concept.

Weight: approx. 1.780g bin size M and insert 220
Sizes: S (shoulder height approx. 58cm and weight approx. 25kg)
M (shoulder height approx. 66cm and weight approx. 33kg)
L (shoulder height approx. 70cm and weight approx. 40kg)
