

## X-SCARF

The X-SCARF offers standard protection against dangerous items and weapons in the throat and neck area. Especially injuries of knives and blades are reduced greatly because of its high cut protection and puncture resistance. Because of its sophisticated design it looks like a normal loop scarf and therefore can be easily worn in a covert operation.

Because of its unique 3D-design the protection does not shift, even when moving the head rapidly. Because of Velcro in the back the size is adjustable. This also is a safety feature to ensure the user cannot be choked by its own scarf.

When putting it on or off, the scarf can easily be opened and therefore it doesn't need to be pulled over the head. This is extremely helpful for users of goggles, helmets, earpieces or microphones, as well as easy on the hairstyle.

If needed separate ballistic package can be inserted, to protect against shots by handgun calibers, fragmentations and to level up the stab protection.

Weight Scarf: approx. 90g

Weight of ballistic insert: approx. 50g

The following ballistic packages are available:

Model 220

Model 320

Model F-355
