

Model 220

Extremely thin, extremely light, best option for deep cover and extremely covert use. One of the lightest ballistic protection solutions on the market.

Ballistic protection: VPAM 2

Model 220c

Same ballistic protection as Model 220, with additional protection. Still extremely thin and super lightweight, optimal solutions for deep cover and covert use.

Ballistic protection: VPAM 2

Cut protection: EN388 (2017), Abschnitt 6.2: Cut Level 4

Puncture resistance: EN388 (2017), Abschnitt 6.4: Level 2

Model 320

Heightened protection against handgun caliber bullets, while staying very thin, extremely light, still good for covert use. Very good solutions for most cases.

Ballistic protection: VPAM 3

Model 320c

Same ballistic protection as Model 320, with additional puncture resistance and cut protection. Very good for most cases, good for covert use.

Ballistic protection: VPAM 3

Cut protection: EN388 (2017), Abschnitt 6.2: Cut Level 4

Puncture resistance: EN388 (2017), Abschnitt 6.4: Level 2

Model 370

An additional protection against contact shots, this model offers still allow aerial weight and it's very thin. High comfort when wearing.

Ballistic protection: VPAM 3, SK1

Model 440f

The package with low aerial weight, additional protection against contact shoots. Good protection against different calibers up to .375 Magnum, additional shots against shrapnel and fragmentation. Hybrid solution.

Ballistic protection: VPAM 3, SK1

Fragmentation protection: according to STANAG 2920, 500 m/s

Model 500f

This optimized flexible high-end package offers protection against contact shots. High performance and protection against different calibers up to .44 Magnum and Russian Tokarev. With advanced protection against shrapnel and fragmentation. Hybrid solution with low aerial weight, very thin.

Ballistic protection: VPAM 3, SK1

Fragmentation protection: according to STANAG 2920, 520 m/s

Model 510f

This package is very flexible, due to the pure Aramid fibre design. With still good aerial weight, it offers protection against contact shots and different calibers up to .357 Magnum.

Ballistic protection: VPAM 3, SK1
STANAG 2920, 600 m/s

Fragmentation protection: according to STANAG 2920, 600 m/s

Modell 565f

This package offers very high protection against fragmentation, as well as different calibers up to .44 Magnum and Russian Tokarev. It still stays very flexible, due to it's design.

Ballistic protection: VPAM 3, SK1

Fragmentation protection: according to STANAG 2920, 645 m/s

Model F-355

This package offers protection against fragmentation.

Fragmentation protection: according to STANAG 2920, 520 m/s
